1. **Voice Mail**

   1.1. **Configuring your Voice Mail Box for the First Time**

To configure your voice mail box press the messages button 📨 on your phone as shown below:

You will be prompted to enter your password. Call the Help Desk for help with your password. Enter your password and follow the prompts. You will be asked to:

- Record your name.
- Set a personal greeting, if desired.
- Change your password.
1.2 Additional Voice Mail Information

1.2.1 Voice Mail Indicator

If you have a voice mail waiting, the red light on your handset will be lit and there will be a blinking envelope on the screen next to your phone number. Also, when you lift your handset, you will see 2 small red lights in the cradle which indicates you have voice mail.

1.2.2 Checking Voice Mail from Off-Campus

To check your voice mail from off-campus, you need to dial your phone number and wait for the greeting to play, then during the greeting dial “*” followed by your “ID”, which is your phone number, then “#”. Enter your password followed by “#”. To access your mailbox, press “2”.

1.2.3 Sending a Call Directly to Voice Mail

To send a call directly to voice mail before answering it, press the softkey button below iDivert.

1.2.4 Transferring a Call to Voice Mail

To transfer a call to voice mail, press the softkey button below Transfer, then press “**”, and dial the five digit extension, then press the softkey button below Transfer or hang up.

1.2.5 Voice Mail Specifics

<table>

<td>1 hour’s worth of messages</td>
</tr>
<tr>
<td>** Life span of voice mail messages</td>
<td>60 days</td>
</tr>
<tr>
<td>Size of password</td>
<td>3-10 digits</td>
</tr>
<tr>
<td>Password reset</td>
<td>45 days</td>
</tr>
</tbody>
</table>

** These are subject to change in order to maintain system performance.
2. Directory Types on your Cisco Phone

There are 4 primary directory types: Missed Calls, Received Calls, Placed Calls, and Corporate Directory. Each of these can be reached by pressing the directories button \(\text{directories}\) on the phone, scrolling to the applicable directory and then pressing the softkey button below Select.

Tip: You can press the number key corresponding to the desired menu option, rather than scrolling and then pressing Select.

- **Missed Calls** shows the calls that have come in that you did not answer. You can use the navigation button to scroll through the missed calls and if there is one that you want to return, you can then press the softkey button below **Dial** to dial that number.

- **Received Calls** shows the calls that you have answered. Again you can scroll through these calls and select one to be dialed again if you wish.

- **Placed Calls** shows the calls that have been made on your phone. You can scroll through these also and redial a selected call.

  Tip: If you press the Navigation Button when at the phone’s main screen, it will automatically scroll through the numbers on your **Placed Calls** directory.

- **Corporate Directory** is a directory of every faculty/staff member on campus that has a phone number assigned to them. This directory is a little different from the others in that when you first select it, you will see a **Directory Search** screen that allows you to enter the first part of a **First Name**, **Last Name**, or **Number**. Selecting the letters to search on works similarly to a cell phone, where you press the number key corresponding to the letter below it and if it is the second letter in the string, you need to quickly press the number key twice, three times quickly for the third letter, etc. You can then press the softkey button below **Search** to get only those people that meet that search criteria. If you did not enter any search criteria, you will see the first 64 people entered into the Corporate Directory. If your search criteria is too wide, you will also be limited to the first 64 entries. You can then scroll through the names and select the one that you wish to dial.
3. Setting Up Services (using the web interface)

Your Cisco Phone is a computer network device that can share information with other network devices. You can establish phone services and control settings and features from your computer using the Cisco CallManager User Options web pages. Once you configure features and services on the web pages, you can access them on your phone.

To log in to the User Options web pages for the first time, you must use Internet Explorer and browse to https://vwtss150/ccmuser. (This site is ONLY available from client computers located on campus.)

When you first bring up the page, you must enter a User ID and Password to log in. Your User ID should be the same as your email name, which is typically: first initial last name (for example, jsmith for Joe Smith). Contact the Help Desk if you need to know the default password.
After you log in you will see the following welcome page, which gives you a menu of options available. You may never need to access some of these options however (Service URL Buttons, Locale for this phone, Locale for these web pages, Plugins).
3.1 Changing Your Password

Contact the helpdesk for the default password for your CallManager User ID. This should be changed immediately upon login! If someone else knows your password they can control settings on your phone so please change your password as soon as you get your new phone. Note: This password is not the same as the password used for voice mail.

Click on the link “Change your Password” on the Cisco CallManager User Options Menu as shown on page 7.

The Change Your Password page displays as shown below.

![Change Your Password Page](image)

Enter the Current Password and then enter the New Password that you want to replace it with and enter it again under Confirm Password.

Click **Update** and your password is changed.
3.2 Changing Your PIN Number

You will need a PIN to set up specific phone services. Contact the Help Desk for the default PIN for your CallManager User ID. This should be changed immediately before configuring any services. If someone else knows your PIN they can control settings on your phone so please change your PIN as soon as you get your new phone. Note: Your PIN is not the same as the password for Call Manager or the password used for voice mail.

Click on the link “Change your PIN” on the Cisco CallManager User Options Menu as shown on page 7.

The Change your Personal Identification Number (PIN) page displays as shown below:

Enter the Current PIN, the New PIN and then Confirm the New PIN.

Click Update to change the PIN.

Note: If you have already added services with the old PIN number, go back to those services and enter your new PIN number so the services will work properly.
3.3 Call Forward All

You can forward all of your calls to a different number. For example, you can forward calls to your voice mail or to an internal extension such as a coworker that will be covering for you while you are away from your desk. Call forwarding can be done directly on your phone by pressing the softkey button below **CFwdALL** on your phone. **OR** From the web interface, you can click on “Forward all calls to a different number” on the Cisco CallManager User Options Menu as shown on page 7 to forward your calls. Check the box next to “Forward all incoming calls on line 1 (Your number) and select either Voice Mail or input the new number that you want the calls forwarded to. (Note: You may have multiple lines appearances on your phone. Be careful to select the appropriate line when forwarding calls to another number.)

Then press the **Update** key.

Forward Your Calls

**Configure Call Forwarding on your Cisco 7961 (Dick Efnor)**

Use this page to forward incoming calls on your phone to another extension. To forward a line, enter the phone number where you want your calls to go. To stop forwarding calls, clear the check box on the line that is being forwarded.

**Status: Ready**

- [ ] Forward all incoming calls on line 1 (77854) to the Voice Mail
- [ ] this number

[Update]

3.4 Adding or Updating Speed Dials (using the web interface)

To add or update speed dials click on the link “Add/Update your Speed Dials” on the Cisco CallManager User Options Menu as shown on page 7. (Note: These could be coordinated within an office to simulate the Intercom function on the old phones.) After clicking the link you can assign speed dials from 1-99 for your phone. If you have any spare programmable buttons on your phone, they will get the first speed dials, e.g. if you have 1 programmable button that has not been set to a specific phone line, speed dial 1 will be on that button.

The remaining speed dials are used by entering the speed dial number on your phone, then pressing the softkey button below AbbrDial on your phone display.

The following screen shot shows the page for adding and updating speed dials. Just enter the complete phone number next to the Speed Dial #. The phone number should be entered exactly the same as if you were dialing the number yourself (for off-campus, enter 9 plus the 7 digit number, etc.). The Display Text field can be used to enter who or what the phone number is for. (If the speed dial is for a programmable button, the Display Text will show next to the button.)

Add/Update Your Speed Dials

Configure the Speed Dial Buttons for your Cisco 7961 (SEP001AA22BEC8C)

Use this page to enter the phone numbers you want associated with each of your Speed Dial buttons. When you are done, click Update.

Note: The display text for each speed dial on the phone can contain up to 30 characters.

3.5 Subscribe/Unsubscribe Phone Services (using the web interface)

Phone services are applications that you can access on your phone. Two default services are available: Fast Dials and My Address Book. Some clients require additional services which will be made available by individual login as needed.

3.5.1 Subscribing to the Personal Address Book Service

Click on the link Configure your Cisco IP Phone Services on the Cisco CallManager User Options Menu.

From the Available Services (for new subscription) menu, select My Address Book and click Continue.
The My Address Book configuration page will appear as shown below:

**Subscribe/Unsubscribe IP Phone Services**

Use this page to subscribe, unsubscribe and update IP Phone Services. To subscribe to a service, select the service below and click Continue. To update (or unsubscribe from) a service to which you are already subscribed, click on the name of the service under Your Subscribed Services.

**Status: Ready**

View page in [English]

Return to the Menu

Log Off

Enter your **User Identification** (same as your CallManager User ID-the portion of your email address to the left of the “@” that you entered on the logon screen), and your **PIN** in the appropriate boxes. (Contact the Help Desk if you don’t know your PIN.) After filling out the appropriate fields click [Subscribe] to subscribe to the **My Address Book** service.

You can then **Return to the Menu** or **Log Off**.
3.5.2 Subscribing to the Fast Dial Service

Click on the link **Configure your Cisco IP Phone Services** on the Cisco CallManager User Options Menu.

From the **Available Services (for new subscription)** menu, select **Fast Dials** and click **Continue**. (See screenshot below.)

The **Fast Dials** configuration page will appear:

**Subscribe/Unsubscribe IP Phone Services**

Use this page to subscribe, unsubscribe and update IP Phone Services. To subscribe to a Service, select the service below and click Continue. To update (or unsubscribe from) a service to which you are already subscribed, click on the name of the service under Your Subscribed Services.

**Status: Ready**

Return to the Menu
Log Off

Enter your **User Identification** (same as your CallManager User ID—the portion of your email address to the left of the “@” that you entered on the logon screen), and your **PIN**
in the appropriate boxes. (Contact the Help Desk if you don’t know your PIN.) After filling out the appropriate fields click [Subscribe] to subscribe to the Fast Dials service. You can then Return to the Menu or Log Off.
3.6 Configuring your Personal Address Book (using the web interface)

Click on the link “Configure your Personal Address Book” on the Cisco CallManager User Options Menu as shown on page 7.

The Find/List Address Book Entries screen will appear.

Click on Add a New Entry.
The **Add a New Address Book Entry** page will appear.

Complete the required fields and then click **Insert** to insert the new entry into the address book.

Click on **Add a New Entry** to add more contacts to your Personal Address Book. Click on **Return to Search** to take you back to the previous screen to do a search for entries within your Personal Address Book.

**Find/List Address Book Entries**

Find and list users using the following options:

Last Name  First Name  Nickname

[ ] ![Show](x) ![items per page](x)

[ ] ![Find](x)  ![Clear](x)

You can enter your search criteria or just press ![Find](x) to show a list of your Address Book entries:
From this page, you can select entries on the left and then Delete the selected entries. You can also select the Fast Dials Indicator ⬅️ to associate a Fast Dial with the entry. If there is no Fast Dials Indicator ⬅️, it means that a phone number has not been entered for the entry.

You can also choose New Search to redo the search, choose Fast Dials to get a list of your Fast Dials, or select Add a New Entry to enter more names into your Address Book.
3.7 Configuring Fast Dials

You can configure fast dials several ways.

**Option 1:**
The Find/List Address Book Entries screen will appear.

---

**Find/List Address Book Entries**

*Find and list users using the following options:*

- **Last Name**
- **First Name**
- **Nickname**

![Image showing the Find/List Address Book Entries screen](image)

Click **Find** to display the entries in your “My Address Book”.

---

**Find/List Address Book Entries**

*Status: Ready*

*Displaying matching item(s) 1 to 3 out of 3*

**Modify Search**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

![Image showing the Find/List Address Book Entries screen with selected entries highlighted](image)

---

**New search | Fast Dials | Add a New Entry**
Click on the Fast Dials Indicator beside the individual’s name that you want to create a Fast Dials entry for.

The **Add a New Fast Dial Entry** page will appear:

**Add a New Fast Dial Entry**

**Status: Ready**

**Fast Dial Association**

Index: 4

**Directory Number Association**

Choose a Directory Number from your Personal Address Book or enter a Directory Number

- [Personal Address Book Entry](#)

- [Enter a directory number](#)

Choose a directory number for the selected Address Book Entry

--- Not Selected ---

![Insert button](#)

First select the Index number that you want to use for the Fast Dial entry. Then select the Personal Address Book Entry and choose the person you want to set up a Fast Dial entry for.

Under **Choose a directory number for the selected Address Book Entry**, you need to select the phone number you want to associate with the Fast Dial entry.

Next click ![Insert button](#) to insert the number into your fast dials list.
Option 2:

Instead of clicking on the Fast Dials Indicator from the Find screen, click on Fast Dials at the bottom of the screen:
In this case the list of Fast Dials displays:

### Find and List Personal Fast Dials

</tbody>
</table>

Return to Search | Add a New Address Book Entry

Click on the word **(Unassigned)** next to the Fast Dials number that you want to set and the **Add a New Fast Dial Entry** screen will again open.

### Option 3:

The third way of entering a Fast Dial is to press the Services button on your phone; then select Fast Dials; scroll to the number that you want to set a Fast Dial for and press the softkey button below Assign. You can then enter a phone number that you want to assign to that Fast Dial. Note that when using this method, you can just assign a phone number to the Fast Dial and cannot tie it to the Personal Address Book.
3.8 Accessing your Phone User Guide (from the web interface)

From the main menu page on the Cisco CallManager User Options Menu as shown on page 7, select “View the User Guide for your phone”. The user guide for the model phone that you have will automatically be displayed in a pdf document. Please read the document to get familiar with your phone. The document will guide you through basic set up options on your phone like how to change the ring volume, speaker volume, and ring tones. The manual is also available on the Help Desk website http://www.virginiawestern.edu/helpdesk/cisco_phones/ along with interactive tutorials.

4. Modifying your Phone Settings

The phone settings are accessed by pressing the Settings button on your phone. When you press this button, there are several options on the menu, but the only one that you want to modify is User Preferences.

If you highlight User Preferences and then press the softkey button below Select, there will be more options to choose from. Normally the only option that you may want to change is Rings, which is the first option. If you select Rings, it will then show a Default Ring and the ring associated with your line. To change the default ring, select Default Ring, then you will then see a number of different ring tones. You can try each one out by selecting a ring, then pressing the softkey button below Play. You can repeat this step as many times as you want until you find the ring that appeals to you. Once you have found the ring you want to use, select it and press the softkey button below the word Save. This will change the ring on your line to this selected ring. You can then press the softkey button below Exit three times to get out of User Preferences.

5. Phone Help

There is help available on your phone through the Help button. The button works two ways. If you press another button on the phone after the Help, information will pop up on the screen specifically about the second button that you pushed. If you do not press a second button, the main help menu will be displayed after a few seconds. There are four main topics: About Your Cisco IP Phone, How Do I…?, Calling Features, and Help. You can then select links to find the topic that you want help on.

You may also contact the Help Desk for assistance at helpdesk@vw.vccs.edu or 7-7354.
